

QUICKSTART

The easiest way to
automate your Mac!

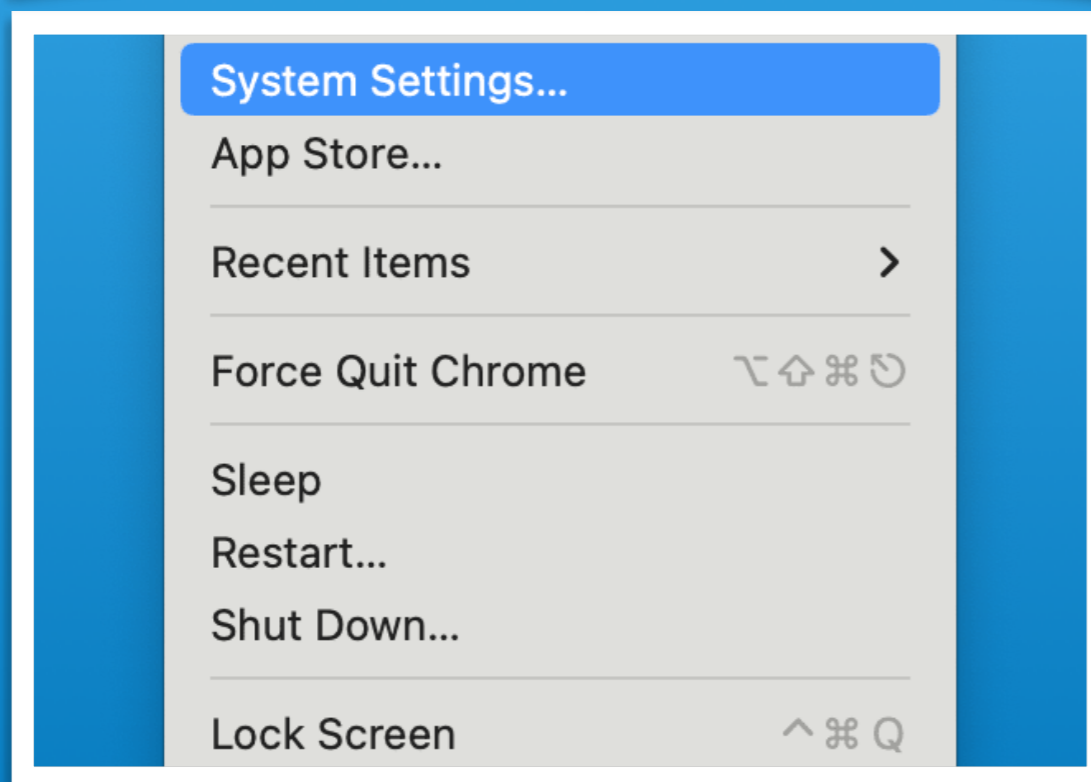

WHAT IS QUICKSTART?

Enhance your Mac experience with QuickStart! This efficient application simplifies your daily tasks, conserves your time, and increases productivity. By automating your Mac through QuickStart, you can reclaim hours each week. Embrace efficiency and eliminate wasted time!

Upon launching QuickStart, the application presents a blank screen. To familiarize yourself with the interface, you will find a question mark icon at the top, which, when clicked, directs you to the QuickStart webpage. All added applications and files are displayed centrally on the screen. In the bottom left corner, a "+" button allows you to select the applications and files you wish to automate. The bottom center features a screen for adjusting the interval timer value, which defaults to 60 minutes; you can enter a different value and click the "Set Timer" button. Additionally, the top left corner provides options to add, rename, or delete tabs.

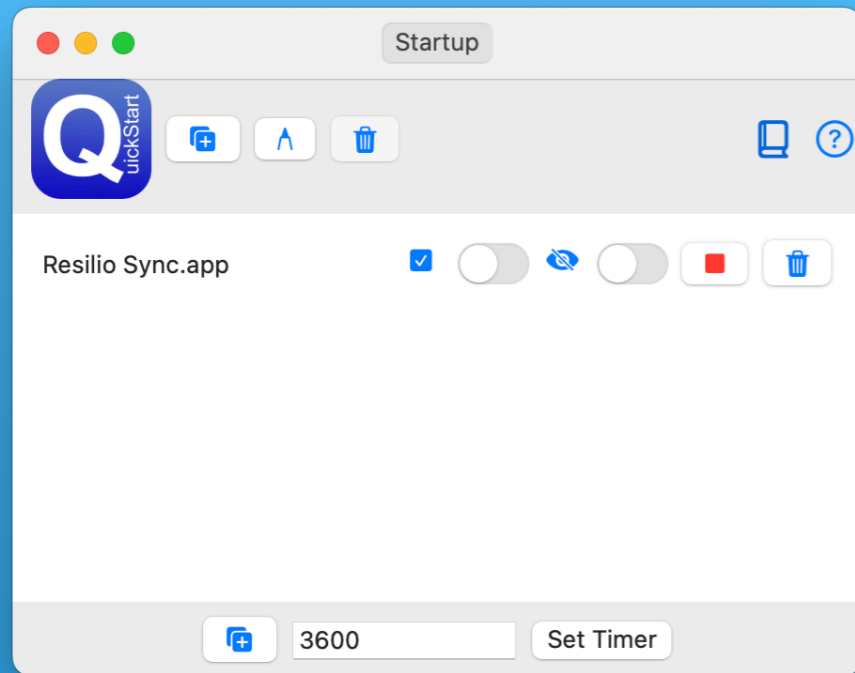

Upon your initial launch of QuickStart, click on the Apple logo located in the top left corner of your screen. Navigate to system settings and find the login items section. To add QuickStart, click the "+" sign, select QuickStart from the list, and then click Open. Following this configuration, QuickStart will automatically launch the next time you start your Mac. Subsequently, all applications and files added to QuickStart will be automated.

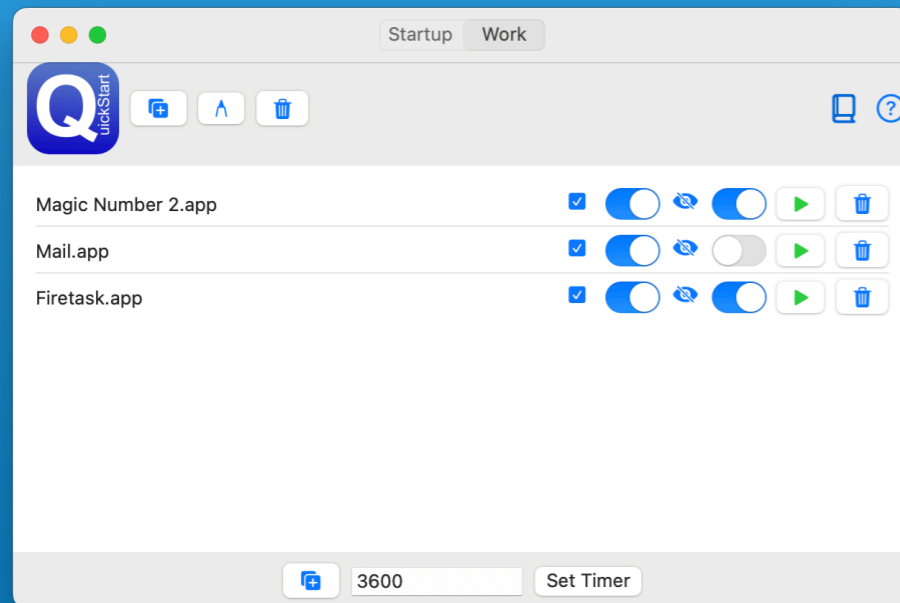

Upon launching QuickStart, you will notice an open tab at the top of the application. You can click the "+" icon at the top to add more tabs. To remove a selected tab, simply use the bin icon.

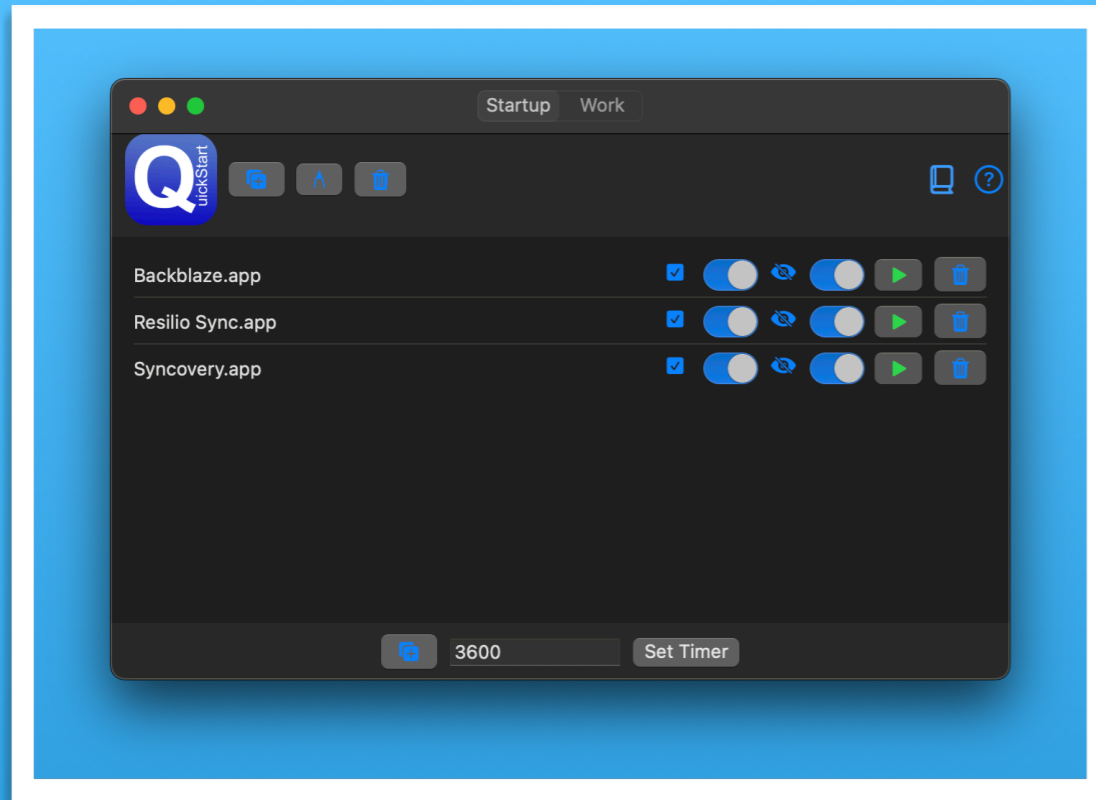

To rename a tab, select the tab, click the pencil icon, enter the new name, and press enter. The text on the tab will be updated accordingly.

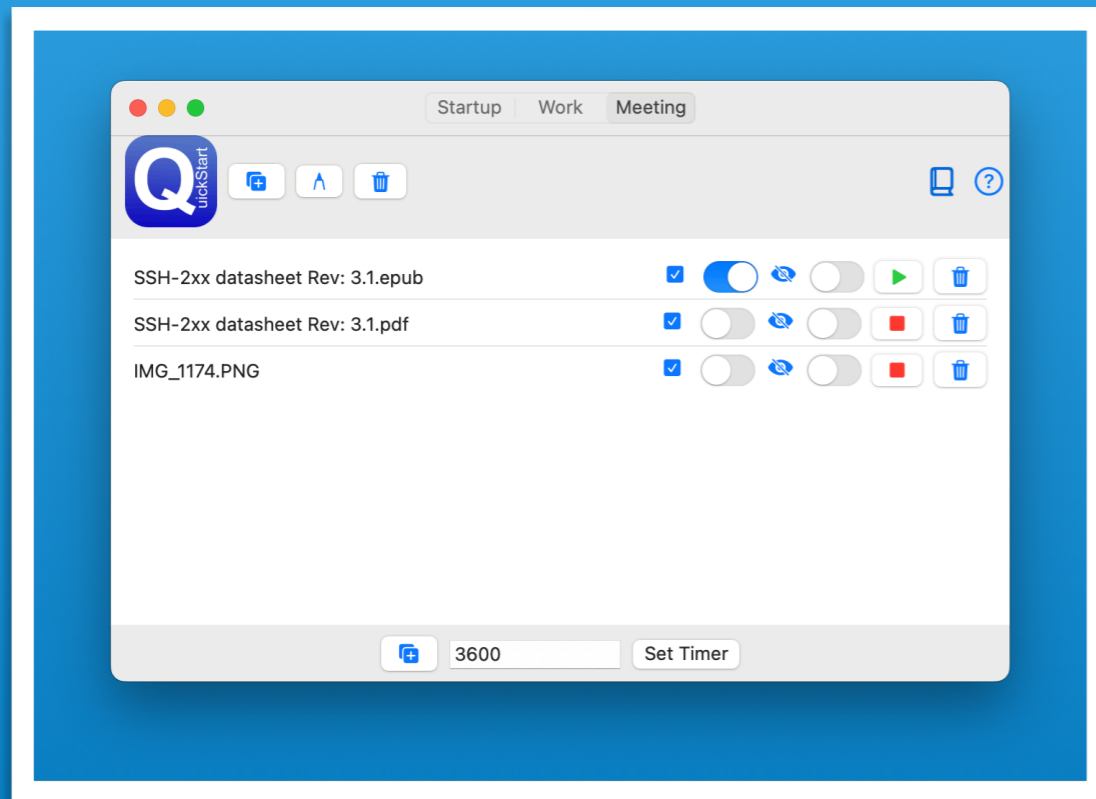

By utilizing the + button located at the bottom left, you can incorporate any application or file into QuickStart for automation purposes. In this instance, I have added Resilio Sync. Once the application is added, two switches appear. Activating the left switch will initiate the app automatically. If both switches are activated, the app will launch but remain concealed in the background. Additionally, you have the option to modify the interval timer at the bottom of the screen by entering the desired time in seconds and pressing Set Timer. Following this, QuickStart will monitor to ensure that all settings for the application remain as configured.

In this instance, I have included an extra tab and added three applications that I frequently use for work. The top and bottom applications remain in the background, while the mail app opens directly. Should you wish to rearrange the order of the items, you can simply drag them to your preferred position.

QuickStart adapts to your system settings and seamlessly transitions to dark mode.

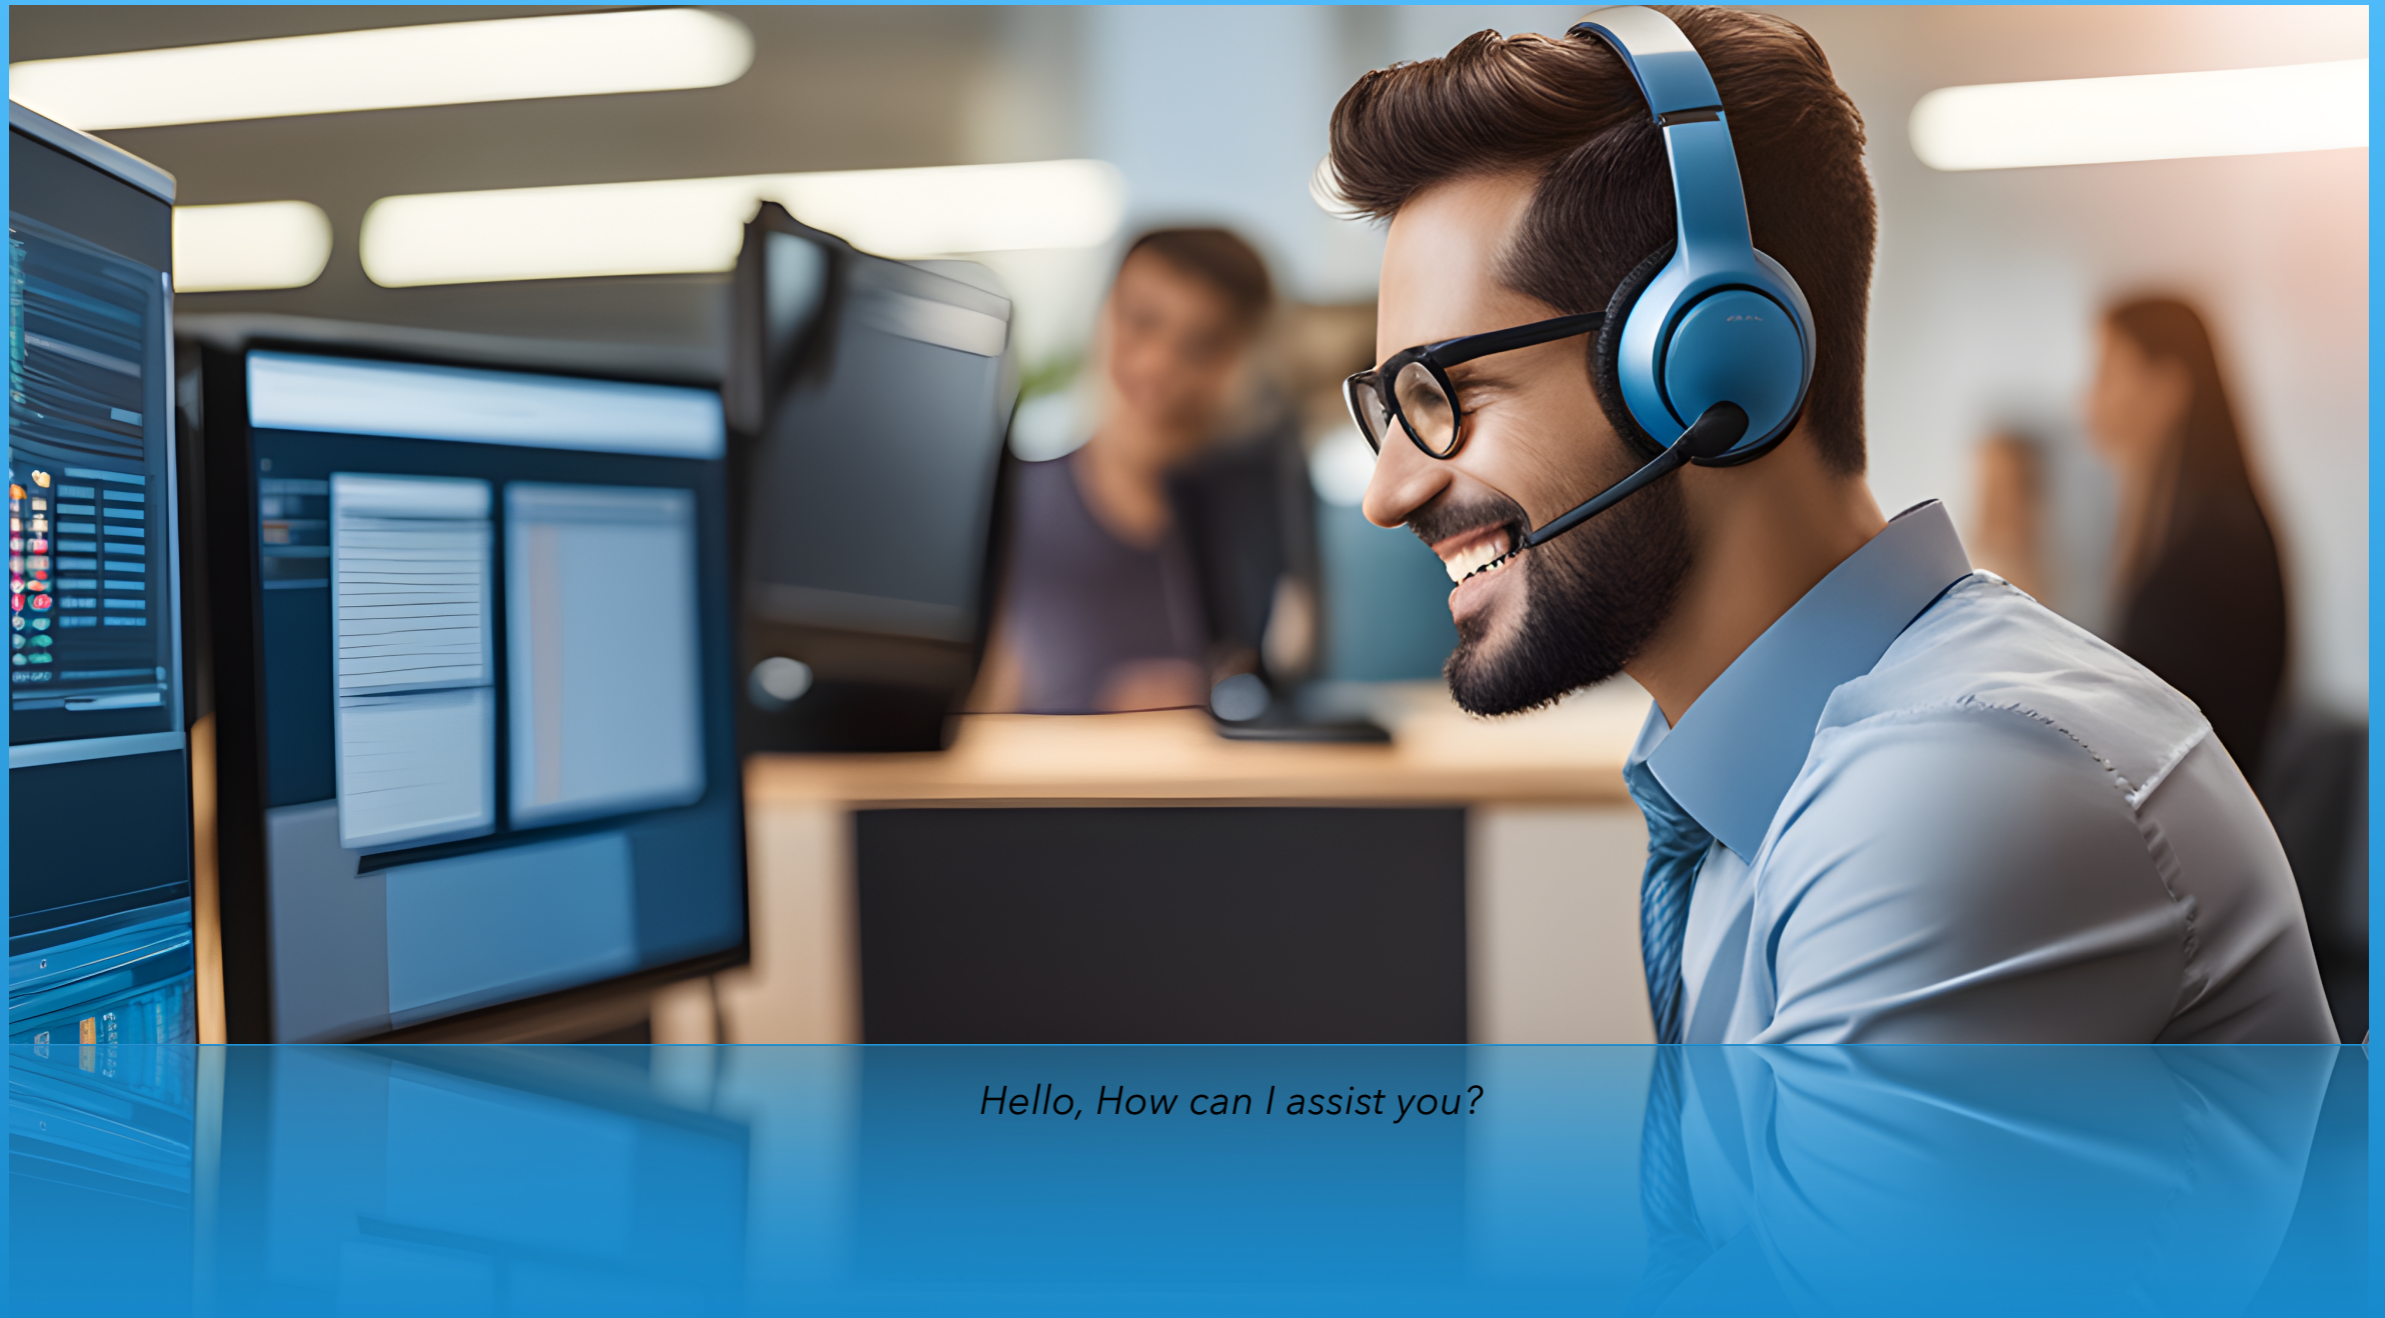

QuickStart offers more than just app automation; it also enables you to prepare all necessary documents for your upcoming meeting. Upon starting your Mac, all relevant documents are readily available, allowing you to appear well-prepared and concentrate on the meeting rather than organizing files. In the example provided, only one document is automated, while the other two can be easily accessed by toggling the left switch, giving you manual control from a single, convenient location.

QuickStart always makes sure your system is ready when you need it!

Introducing QuickStart - your essential companion application! Eliminate the inconvenience of configuring your system each time you start it. Whether you are at the office, engaged in graphic design, or simply require your VPN and antivirus software to operate seamlessly in the background, QuickStart is here to assist you!

Hello, How can I assist you?

Enlightenment.School, the developer of QuickStart, is readily available to provide support. Please feel free to send us an email in either English or Dutch, and we will respond as promptly as possible.
